Prüfungsnummer: 70-433

Prüfungsname: TS: Microsoft SQL Server 2008, Database Development

Version: Demo

QUESTION 1

You have a user named John. He has SELECT access to the Sales schema. You need to eliminate

John's SELECT access rights from the Sales. Sales Order table without affecting his other permissions.

Which Transact-SQL statement should you use?

- A. DROP USER John;
- B. DENY SELECT ON Sales. Sales Order TO John;
- C. GRANT DELETE ON Sales.SalesOrder TO John;
- D. REVOKE SELECT ON Sales. Sales Order FROM John;

Answer: B

QUESTION 2

You need to create a column that allows you to create a unique constraint.

Which two column definitions should you choose? (Each correct answer presents a complete solution.

Choose two.)

- A. nvarchar(100) NULL
- B. nvarchar(max) NOT NULL
- C. nvarchar(100) NOT NULL
- D. nvarchar(100) SPARSE NULL

Answer: AC

QUESTION 3

You manage a SQL Server 2008 database that is located at your company's corporate headquarters.

The database contains a table named dbo.Sales. You need to create different views of the dbo.Sales

table that will be used by each region to insert, update, and delete rows. Each regional office must only be

able to insert, update, and delete rows for their respective region.

Which view should you create for Region1?

A. CREATE VIEW dbo.Region1Sales

AS

```
SELECT SalesID,OrderQty,SalespersonID,RegionID
FROM dbo.Sales
WHERE RegionID = 1;
```

B. CREATE VIEW dbo.Region1Sales

AS

SELECT SalesID, OrderQty, SalespersonID, RegionID

FROM dbo.Sales

WHERE RegionID = 1

WITH CHECK OPTION;

C. CREATE VIEW dbo.Region1Sales

WITH SCHEMABINDING

AS SELECT SalesID,OrderQty,SalespersonID,RegionID FROM dbo.Sales WHERE RegionID = 1;

D. CREATE VIEW dbo.Region1Sales

WITH VIEW_METADATA

AS

SELECT SalesID, OrderQty, SalespersonID, RegionID

FROM dbo.Sales

WHERE RegionID = 1;

Answer: B

QUESTION 4

You administer a SQL Server 2008 database that contains a table name dbo.Sales, which contains the

following table definition:

CREATE TABLE [dbo].[Sales](

[SalesID] [int] IDENTITY(1,1) NOT NULL PRIMARY KEY CLUSTERED,

[OrderDate] [datetime] NOT NULL,

[CustomerID] [int] NOT NULL,

[SalesPersonID] [int] NULL,

[CommentDate] [date] NULL);

This table contains millions of orders. You run the following query to determine when sales persons

comment in the dbo.Sales table: SELECT

SalesID, CustomerID, Sales PersonID, CommentDate FROM dbo. Sales

WHERE CommentDate IS NOT NULL

AND SalesPersonID IS NOT NULL; You discover that this query runs slow. After examining the data, you find only 1% of rows have comment dates and the SalesPersonID is null on 10% of the rows. You need to create an index to optimize the query. The index must conserve disk space while optimizing your query. Which index

should you create?

A. CREATE NONCLUSTERED INDEX idx1

ON dbo.Sales (CustomerID)

INCLUDE (CommentDate, SalesPersonID);

B. CREATE NONCLUSTERED INDEX idx1

ON dbo.Sales (SalesPersonID)

INCLUDE (CommentDate,CustomerID);

C. CREATE NONCLUSTERED INDEX idx1

ON dbo.Sales (CustomerID)

INCLUDE(CommentDate)

WHERE SalesPersonID IS NOT NULL;

D. CREATE NONCLUSTERED INDEX idx1

ON dbo.Sales (CommentDate, SalesPersonID)

INCLUDE(CustomerID)

WHERE CommentDate IS NOT NULL;

Answer: D

QUESTION 5

Your database is 5GB and contains a table named SalesHistory. Sales information is frequently

inserted and updated.

You discover that excessive page splitting is occurring.

You need to reduce the occurrence of page splitting in the SalesHistory table.

Which code segment should you use?.

A. ALTER DATABASE Sales MODIFY FILE

(NAME = Salesdat3,

SIZE = 10GB);

- B. ALTER INDEX ALL ON Sales.SalesHistory REBUILD WITH (FILLFACTOR = 60);
- C. EXEC sys.sp_configure 'fill factor (%)', '60';
- D. UPDATE STATISTICS Sales.SalesHistory(Products) WITH FULLSCAN, NORECOMPUTE;

Answer: B

QUESTION 6

You have a table named dbo.Customers. The table was created by using the following Transact-SQL statement: CREATE TABLE dbo.Customers

CustomerID int IDENTITY(1,1) PRIMARY KEY CLUSTERED,

AccountNumber nvarchar(25) NOT NULL,

FirstName nvarchar(50) NOT NULL,

LastName nvarchar(50) NOT NULL,

AddressLine1 nvarchar(255) NOT NULL,

AddressLine2 nvarchar(255) NOT NULL,

City nvarchar(50) NOT NULL,

StateProvince nvarchar(50) NOT NULL,

Country nvarchar(50) NOT NULL,

PostalCode nvarchar(50) NOT NULL,

CreateDate datetime NOT NULL DEFAULT(GETDATE()),

ModifiedDate datetime NOT NULL DEFAULT(GETDATE())

-) You create a stored procedure that includes the AccountNumber, Country, and StateProvince columns from the dbo.Customers table. The stored procedure accepts a parameter to filter the output on the AccountNumber column. You need to optimize the performance of the stored procedure. You must not change the existing structure of the table. Which Transact-SQL statement should you use?
- A. CREATE STATISTICS ST_Customer_AccountNumber ON dbo.Customer (AccountNumber) WITH FULLSCAN:
- B. CREATE CLUSTERED INDEX IX_Customer_AccountNumber ON dbo.Customer (AccountNumber);
- C. CREATE NONCLUSTERED INDEX IX_Customer_AccountNumber ON dbo.Customer (AccountNumber) WHERE AccountNumber = ";
- D. CREATE NONCLUSTERED INDEX IX_Customer_AccountNumber ON dbo.Customer (AccountNumber) INCLUDE (Country, StateProvince);

Answer: D

QUESTION 7

You have a table named Customer.

You need to ensure that customer data in the table meets the following requirements: credit limit must be zero unless customer identification has been verified. credit limit must be less than 10.000.

Which constraint should you use?

- A. CHECK (CreditLimt BETWEEN 1 AND 10000)
- B. CHECK (Verified = 1 AND CreditLimt BETWEEN 1 AND 10000)

- C. CHECK ((CreditLimt = 0 AND Verified = 0) OR (CreditLimt BETWEEN 1 AND 10000 AND Verified = 1))
- D. CHECK ((CreditLimt = 0 AND Verified = 0) AND (CreditLimt BETWEEN 1 AND 10000 AND Verified = 1))

Answer: C

QUESTION 8

You have a table named AccountsReceivable. The table has no indexes. There are 75,000 rows in the

table. You have a partition function named FG_AccountData. The AccountsReceivable table is defined in

the following Transact-SQL statement:

CREATE TABLE Accounts Receivable (

column_a INT NOT NULL, column_b VARCHAR(20) NULL)

ON [PRIMARY]; You need to move the AccountsReceivable table from the PRIMARY file group to FG_AccountData. Which Transact-SQL statement should you use?

- A. CREATE CLUSTERED INDEX idx_AccountsReceivable ON AccountsReceivable(column_a) ON [FG_AccountData];
- B. CREATE NONCLUSTERED INDEX idx_AccountsReceivable ON AccountsReceivable(column_a) ON [FG_AccountData];
- C. CREATE CLUSTERED INDEX idx_AccountsReceivable ON AccountsReceivable(column_a) ON FG_AccountData(column_a);
- D. CREATE NONCLUSTERED INDEX idx_AccountsReceivable ON AccountsReceivable(column_a) ON FG_AccountData(column_a);

Answer: C

QUESTION 9

You have a SQL Server 2008 database named Contoso with a table named Invoice. The primary key of the table is Invoiceld, and it is populated by using the identity property. The Invoice table is related to the InvoiceLineItem table. You remove all constraints from the Invoice table during a data load to increase load speed. You notice that while the constraints were removed, a row with InvoiceId = 10 was removed from the database. You need to re-insert the row into the Invoice table with the same InvoiceId value. Which Transact-SQL statement should you use?

- A. INSERT INTO Invoice (InvoiceId, ... VALUES (10, ...
- B. SET IDENTITY_INSERT Invoice ON;

INSERT INTO Invoice (InvoiceId, ...

VALUES (10, ...

SET IDENTITY_INSERT Invoice OFF;

C. ALTER TABLE Invoice;

ALTER COLUMN Invoiceld int;

INSERT INTO Invoice (Invoiceld, ...

VALUES (10, ...

D. ALTER DATABASE Contoso SET SINGLE_USER;

INSERT INTO Invoice (Invoiceld, ...

VALUES (10, ...

ALTER DATABASE Contoso SET MULTI_USER;

Answer: B

QUESTION 10

You are developing a new database. The database contains two tables named SalesOrderDetail and

Product.

You need to ensure that all products referenced in the SalesOrderDetail table have a corresponding

record in the Product table.

Which method should you use?

- A. JOIN
- B. DDL trigger
- C. Foreign key constraint
- D. Primary key constraint

Answer: C

QUESTION 11

You are creating a table that stores the GPS location of customers.

You need to ensure that the table allows you to identify customers within a specified sales boundary and

to calculate the distance between a customer and the nearest store.

Which data type should you use?

- A. geometry
- B. geography
- C. nvarchar(max)
- D. varbinary(max) FILESTREAM

Answer: B

QUESTION 12

You plan to add a new column named SmallKey to the Sales.Product table that will be used in a

unique constraint. You are required to ensure that the following information is applied when adding the

new column:

'a1' and 'A1' are treated as different values

'a' and 'A' sort before 'b' and 'B' in an ORDER BY clause You need to select the collation that meets the requirements for the new column. Which collation should you select?

- A. Latin1_General_BIN
- B. SQL_Latin1_General_CP1_CI_AI
- C. SQL_Latin1_General_CP1_CI_AS
- D. SQL_Latin1_General_CP1_CS_AS

Answer: D

QUESTION 13

You have multiple tables that represent properties of the same kind of entities. The property values

are comprised of text, geometry, varchar(max), and user-defined types specified as 'bit NOT NULL' data

types.

You plan to consolidate the data from multiple tables into a single table. The table will use semi-structured

storage by taking advantage of the SPARSE option.

You are tasked to identify the data types that are compatible with the SPARSE option. Which data type is compatible with the SPARSE option?

- A. text
- B. geometry
- C. varchar(max)

D. A user-defined type defined as 'bit NOT NULL'

Answer: C

QUESTION 14

You currently store date information in two columns. One column contains the date in local time and

one column contains the difference between local time and UTC time. You need to store this data in a

single column.

Which data type should you use?

- A. time
- B. datetime2
- C. datetime2(5)
- D. datetimeoffset

Answer: D

QUESTION 15

You are creating a new table in a database. Your business requires you to store data in the table for only seven days.

You need to implement a partitioned table to meet this business requirement.

Which tasks should you complete?

A. Create the partition function

Create the partition scheme

Create the table

B. Create the partition function

Create the table

Create a filtered index

C. Add a secondary file to the primary filegroups

Create the table

Create the distributed partitioned view

D. Create the partition function

Create the partition scheme

Create the distributed partitioned view

Answer: A
